

Norham Renewable Development

Public Consultation 2024

Thank you for taking time to come along to today's public exhibition for Norham Renewable Development. This exhibition is being held to give the local community an opportunity to find out more about the Proposed Development and the Environmental Impact Assessments (EIA) underway as part of the planning process.

The Proposed Development will consist of a single wind turbine, with a tip height of 67m, and a solar array with a generating capacity of approximately 8.9MW. This gives the Site a combined generation capacity of 9.8MW.

Please take time to review the information presented. Members of the project team from Norham Development Trust and Green Cat Renewables are on hand to answer to any questions you may have.
